SUMMARY

Software Engineer with 5+ years of experience building scalable, high-performance web applications and AI-powered platforms. Proven track record of leading frontend teams, architecting full-stack solutions, and delivering measurable improvements in user engagement and system performance. Skilled in React ecosystems, state management, and integrating AI/automation workflows. Passionate about clean code, intuitive UX, and collaborating in Agile environments to solve real-world problems.

PROFESSIONAL EXPERIENCE

Cogent Labs, Full Stack Engineer

Jan 2022 – Present

- **Led the frontend team** across multiple projects, mentoring engineers and building a shared component library that helped the whole company ship faster.
- Expanded from frontend ownership into **full-stack delivery** using **Django** and **PostgreSQL**, taking products from architecture through deployment and closing the loop between UI and backend systems.
- Built real-time streaming features using **WebSockets** and **SSE** for live data delivery, **improving response time by 40%** and significantly enhancing user-perceived performance.
- Implemented a test-driven workflow using **React Testing Library** and **Vitest**, **lifting code coverage to 60%+** and cutting regressions across all shipped products.
- Designed modular frontend dashboards using **TypeScript** and **React**, leveraging **Redis** for high-speed caching and static type checking to **eliminate runtime errors** and improve maintainability.
- Delivered end-to-end SaaS applications using **React** and **React Query**, engineering scalable **RESTful APIs** to support complex workflows for a rapidly growing user base and **improving client-facing product performance by 30%**.

LogicsDrive, Frontend Engineer

Feb 2021 – Jan 2022

- Delivered responsive, high-fidelity interfaces using **Vue.js**, **HTML**, **CSS**, **SCSS**, and **Bootstrap** across **5+ client engagements**, including Zain Group and Aqarat, spanning telecom and real estate.
- Built Zain Kuwait's interactive **10+ page annual report** using **GSAP 3** animations and reusable, scalable components, delivering a stunning, responsive experience that elevated the brand across every client project.
- Built core Aqarat features, including property search, filtering, and dynamic listing pages, using reusable components that **became central to the platform's day-to-day user experience**.
- Partnered with cross-functional design, backend, and QA teams to streamline delivery pipelines, **consistently shipping projects on schedule**.

PROJECTS

Booosted | React, React Query, Django, PostgreSQL, Nginx, RAG, LLM Integration

- Designed and built an end-to-end AI chatbot platform from the ground up, using **RAG** and **LLM integration** to solve customer support challenges with proactive, context-aware responses, becoming **one of the leading chatbot services in Finland**.
- Enabled chatbot training via file uploads and web URLs, allowing the system to intelligently leverage client data and deliver **accurate, highly responsive user interactions**.
- Built the chatbot widget's frontend with **React** with a **fully customizable appearance**, letting each client match it to their own website, plus **i18n support** for multiple languages.
- Delivered a scalable, reliable, user-friendly solution backed by comprehensive unit and integration tests (**React Testing Library** + **Vitest**), **boosting customer engagement, support efficiency, and long-term maintainability**.

Zendash | React, ApexCharts, Stripe, Generative AI

- Built a marketing analytics aggregator from the ground up with a scalable architecture, translating complex marketing data into **actionable insights for SMBs**.
- Designed and implemented a drag-and-drop dashboard builder, letting users create **fully customizable analytics views** powered by interactive **ApexCharts** visualizations.
- Integrated **Stripe** for secure payments and subscription management, plus **Generative AI features** that auto-generate dashboard summaries and insights to enhance decision-making.

Blabble | React, MUI, Redux-Saga, PWA, Stripe

- Built a complete UK mortgage lead management platform enabling users to buy, manage, and **convert leads in real-time**.
- Converted the application into a **Progressive Web App (PWA)** for offline support and cross-device accessibility, with **Redux-Saga** powering efficient, predictable state management and API data fetching.
- Developed a **unified MUI theming system** for faster development and component reusability, and integrated **Stripe** for secure payments and subscription management.

XON | React, TypeScript, Redux, Notion-style Editor

- Developed **4+ dynamic flashcard types** with interactive features, improving learning retention and user engagement.
- Built a **Notion-like rich text editor** for creating and customizing flashcards, delivering an intuitive, flexible authoring experience.
- Built clean, scalable, reusable components to improve development efficiency and maintainability while **leading the frontend team** and mentoring junior developers.

EDUCATION

Bachelor of Science, Computer Science, Government College University CGPA: 3.27	2018 – 2022
F.Sc Pre-Engineering, Government Graduate College of Science	2016 – 2018

SKILLS

Languages: JavaScript, TypeScript, Python

Frontend: React.js, Next.js, React Query, Redux, Redux Toolkit, Redux Middleware (Thunk, Saga), Zustand, React Hook Form, Zod, Tailwind, Material UI, Shadcn, SCSS, GSAP 3, HTML/CSS

Backend & APIs: Django, Django DRF, REST APIs, PostgreSQL, WebSockets, SSE, Redis, Webhooks

AI & Automation: RAG, LLM Integration, Generative AI, Prompt Engineering, Agentic AI, AI Agents, MCP, n8n

Testing: React Testing Library, Vitest, Jest, Cypress

Integrations: Stripe, ApexCharts, PWA, Sentry, Google Analytics

CI/CD & Deployment: GitHub Actions, Docker, CI/CD Pipelines, Vercel, Netlify, Nginx

CERTIFICATIONS

Building with the Claude API, Anthropic, 2026

Claude Code 101, Anthropic, 2026

AI Fluency: Framework & Foundations, Anthropic, 2026

Claude 101, Anthropic, 2026

JavaScript Algorithms and Data Structures (Beta), freeCodeCamp, 2024

Responsive Web Design, freeCodeCamp, 2024
